

## REDUCING HOSPITAL COSTS BY STREAMLINING THE WASTE PROCESS FLOW

### ABOUT US

Since 1994, Waste Link Corp. has been reducing waste disposal costs and creating recycling programs for our customers. We save our customers 10%-40% on their waste disposal costs.

We start with our comprehensive audit, which assesses the current waste generation activities, handling practices and removal services. The audit identifies recommended changes to operating procedures that will immediately improve efficiency, reduce waste expenses and realize hidden savings.

### OUR ADVANTAGE

Our waste audit services are a key part of any well-run environmental services department looking to enhance service to the hospital. We frequently hear that the waste process flow, from point of generation to the dock area, is typically an afterthought, unless there are problems. Waste Link analyzes the current set-up to identify potential problems before they become costly and troublesome. We determine other areas for improvement which are affected by time, space and labor constraints. Situations such as double handling of waste, inaccurate container placement or size, or internal collection resources, can all be improved with our recommendations.

### THE BENEFITS

The audit reveals potential changes to the way healthcare facilities manage their diverse waste streams. When the changes are implemented, the hospital will see:

1. Reduced volumes of waste shipped to the landfill
2. Increased volumes of recyclables
3. Decreased cost of waste disposal
4. Improvement in employee health and safety

Waste Link has the expertise and industry experience necessary to help streamline the entire waste disposal process and the end result is a reduction in cost.

### THE AUDIT

The Waste Link comprehensive audit process includes:

1. Data Collection
2. Analysis and Recommendations
3. Implementation
4. Monitoring

### KEY AREAS

Key areas in hospitals that can use improvement:

1. All patient rooms
2. Clinical areas
3. Non-clinical areas
4. Office areas
5. Public areas
